

# Contents

<b>Introduction</b> .....	1
Levente Tamás and Lucian Buşoniu	
1    Brief Background .....	1
2    Goal and Motivation of the Book .....	2
3    Book Structure .....	4
<b>Part I Learning Control in Unknown Environments</b>	
<b>1 Robot Learning for Persistent Autonomy</b> .....	11
Petar Kormushev and Seyed Reza Ahmadzadeh	
1.1 Persistent Autonomy .....	11
1.2 Robot Learning Architecture .....	12
1.3 Learning of Reactive Behavior .....	13
1.3.1 Autonomous Robotic Valve Turning .....	14
1.3.2 Related Work .....	15
1.3.3 Hierarchical Learning Architecture .....	16
1.3.4 Learning Methodology .....	17
1.3.5 Imitation Learning .....	19
1.3.6 Force/Motion Control Strategy .....	20
1.3.7 Learning of Reactive Behavior using RFDm .....	21
1.3.8 Iterative Learning Control .....	25
1.4 Learning to Recover from Failures .....	25
1.4.1 Methodology .....	26
1.4.2 Fault Detection Module .....	27
1.4.3 Problem Formulation .....	28
1.4.4 Learning Methodology .....	28
1.4.5 Experiments .....	31
1.5 Conclusion .....	34

<b>2</b>	<b>The Explore-Exploit Dilemma in Nonstationary Decision Making under Uncertainty</b> . . . . .	37
	Allan Axelrod and Girish Chowdhary	
2.1	Introduction . . . . .	37
2.2	Case Study 1: Model-Based Reinforcement Learning for Nonstationary Environments . . . . .	41
2.2.1	Gaussian Process Regression and Clustering . . . . .	42
2.2.2	GP-NBC-MBRL Solution to Nonstationary MDPs . . . . .	44
2.2.3	Example Experiment . . . . .	46
2.2.4	Summary . . . . .	46
2.3	Case Study 2: Monitoring Spatiotemporally Evolving Processes using Unattended Ground Sensors and Data-Ferrying UAS . . . . .	48
2.3.1	Connecting the FoW Functional to Data . . . . .	49
2.3.2	Problem Definition . . . . .	50
2.3.3	Solution Methods . . . . .	52
2.3.4	Simulation Results . . . . .	55
2.3.5	EIEIO Summary . . . . .	57
<b>3</b>	<b>Learning Complex Behaviors via Sequential Composition and Passivity-based Control</b> . . . . .	59
	Gabriel A.D. Lopes, Esmaeil Najafi, Subramanya P. Nagesh Rao, and Robert Babuška	
3.1	Introduction . . . . .	60
3.2	Sequential Composition . . . . .	62
3.3	Passivity-based Control . . . . .	63
3.3.1	Interconnection and Damping Assignment Passivity-based Control . . . . .	64
3.3.2	Algebraic IDA-PBC . . . . .	65
3.4	Estimating the Domain of Attraction . . . . .	66
3.5	Learning via Composition . . . . .	68
3.5.1	Actor-critic . . . . .	69
3.5.2	Algebraic Interconnection and Damping Assignment Actor-Critic . . . . .	70
3.5.3	Sequential Composition Reinforcement Learning Algorithm . . . . .	71
3.6	An Example Simulation . . . . .	72
3.7	Conclusions . . . . .	76
<b>4</b>	<b>Visuospatial Skill Learning</b> . . . . .	79
	Seyed Reza Ahmadzadeh and Petar Kormushev	
4.1	Introduction . . . . .	79
4.2	Related Work . . . . .	81
4.3	Introduction to Visuospatial Skill Learning . . . . .	84
4.3.1	Terminology . . . . .	84
4.3.2	Problem Statement . . . . .	85
4.3.3	Methodology . . . . .	86

4.4	Implementation of VSL . . . . .	87
4.4.1	Coordinate Transformation . . . . .	88
4.4.2	Image Processing . . . . .	88
4.4.3	Trajectory Generation . . . . .	90
4.4.4	Grasp Synthesis . . . . .	92
4.5	Experimental Results . . . . .	92
4.5.1	Simulated Experiments . . . . .	92
4.5.2	Real-world Experiments . . . . .	95
4.6	Conclusions . . . . .	102

## Part II Dealing with Sensing Uncertainty

<b>5</b>	<b>Observer Design for Robotic Systems via Takagi-Sugeno Models and Linear Matrix Inequalities . . . . .</b>	<b>105</b>
	Victor Estrada-Manzo, Zsófia Lendek, and Thierry-Marie Guerra	
5.1	Introduction . . . . .	105
5.2	Preliminaries . . . . .	107
5.2.1	Descriptor Models of Robotic Systems . . . . .	107
5.2.2	Takagi-Sugeno Models . . . . .	108
5.2.3	Linear Matrix Inequalities . . . . .	113
5.3	Observer Design for TS Descriptor Models . . . . .	115
5.4	Simulation Example . . . . .	122
5.5	Summary . . . . .	126
<b>6</b>	<b>Homography Estimation between Omnidirectional Cameras without Point Correspondences . . . . .</b>	<b>129</b>
	Róbert Fröhlich, Levente Tamás, and Zoltan Kato	
6.1	Introduction . . . . .	129
6.2	Planar Homography for Central Omnidirectional Cameras . . . . .	131
6.3	Homography Estimation . . . . .	132
6.3.1	Construction of a System of Equations . . . . .	133
6.3.2	Normalization and Initialization . . . . .	134
6.4	Omnidirectional Camera Models . . . . .	135
6.4.1	The General Catadioptric Camera Model . . . . .	136
6.4.2	Scaramuzza's Omnidirectional Camera Model . . . . .	137
6.5	Experimental Results . . . . .	138
6.6	Relative Pose from Homography . . . . .	143
6.7	Conclusions . . . . .	148
<b>7</b>	<b>Dynamic 3D Environment Perception and Reconstruction Using a Mobile Rotating Multi-beam Lidar Scanner . . . . .</b>	<b>151</b>
	Attila Börcs, Balázs Nagy, and Csaba Benedek	
7.1	Introduction . . . . .	151
7.2	3D People Surveillance . . . . .	154
7.2.1	Foreground-background Separation . . . . .	155
7.2.2	Pedestrian Detection and Multi-target Tracking . . . . .	156

7.2.3	Evaluation	158
7.3	Real Time Vehicle Detection for Autonomous Cars	160
7.3.1	Object Extraction by Point Cloud Segmentation	162
7.3.2	Object Level Feature Extraction and Vehicle Recognition	164
7.3.3	Evaluation of Real-time Vehicle Detection	167
7.4	Large Scale Urban Scene Analysis and Reconstruction	167
7.4.1	Multiframe Point Cloud Processing Framework	169
7.4.2	Experiments	174
7.5	Conclusion	176
<b>8</b>	<b>ROBOSHERLOCK: Unstructured Information Processing Framework for Robotic Perception</b>	<b>179</b>
	Michael Beetz, Ferenc Bálint-Benczédi, Nico Blodow, Christian Kerl, Zoltán-Csaba Márton, Daniel Nyga, Florian Seidel, Thiemo Wiedemeyer, and Jan-Hendrik Worch*	
8.1	Introduction	180
8.2	Related Work and Motivation	181
8.3	Overview of ROBOSHERLOCK	183
8.4	Conceptual Framework	185
8.4.1	Common Analysis Structure (CAS)	186
8.4.2	Analysis Engines in ROBOSHERLOCK	187
8.4.3	Object Perception Type System	190
8.4.4	Integrating Perception Capabilities into ROBOSHERLOCK	190
8.5	Tracking and Entity Resolution	191
8.6	Information Fusion	193
8.7	Experiments and Results	197
8.7.1	Illustrative Example	197
8.7.2	Entity Resolution	198
8.7.3	Information Fusion	199
8.8	Conclusion and Future Work	204
<b>9</b>	<b>Navigation Under Uncertainty Based on Active SLAM Concepts</b>	<b>205</b>
	Henry Carrillo and José A. Castellanos	
9.1	Introduction	205
9.1.1	SLAM	207
9.1.2	Active Mapping	207
9.1.3	Active Localization	208
9.1.4	Active SLAM	208
9.2	High Level View of General Active SLAM Algorithms	209
9.3	Uncertainty Criteria	210
9.4	Main Paradigms of Active SLAM	212
9.4.1	A First Approach: Local Search Using Optimality Criteria	212
9.4.2	A Second Look: an Information Gain Approach	213
9.4.3	A Third Strategy: Considering Multiple Steps Ahead	215
9.5	Navigation Under Uncertainty: An Active SLAM Related Application	216

9.5.1	Path Planning in the Belief Space	216
9.6	Our Approach: Fast Minimum Uncertainty Search Over a Pose Graph Representation	217
9.6.1	Metric Calculation	218
9.6.2	Increasing Traversability	218
9.6.3	Decision Points	219
9.6.4	Decision Graph	219
9.6.5	Searching Over the Decision Graph	221
9.7	Experiments	222
9.7.1	Graph Reduction	222
9.7.2	$H_0$ : Are the Minimum Uncertainty Path and the Shortest Necessarily Equal?	223
9.7.3	Timing Comparisons	225
9.8	Discussion	225
<b>10</b>	<b>Interactive Segmentation of Textured and Textureless Objects</b>	<b>227</b>
	Karol Hausman, Dejan Pangercic, Zoltán-Csaba Márton, Ferenc Bálint-Benczédi, Christian Bersch, Megha Gupta, Gaurav Sukhatme, and Michael Beetz	
10.1	Introduction and Motivation	228
10.2	Overview of Interactive Segmentation Processing Steps	230
10.3	Segmentation of Cluttered Tabletop Scene	231
10.4	Push Point Selection and Validation	232
10.4.1	Contact Points from Concave Corners	233
10.4.2	Push Direction and Execution	234
10.5	Feature Extraction and Tracking	234
10.6	Feature Trajectory Clustering	235
10.6.1	Randomized Feature Trajectory Clustering	236
10.6.2	Trajectory Clustering Analysis	239
10.6.3	Exhaustive Graph-based Trajectory Clustering	241
10.7	Stopping Criteria and Finalizing Object Models	242
10.7.1	Verification of Correctness of Segmentation	242
10.7.2	Dense Model Reconstruction	244
10.8	Results	246
10.8.1	Random vs. Corner-based Pushing	246
10.8.2	Trajectory Clustering	248
10.8.3	System Integration and Validation	249
10.9	Conclusions	250
<b>Part III Control of Networked and Interconnected Robots</b>		
<b>11</b>	<b>Vision-Based Quadcopter Navigation in Structured Environments</b>	<b>253</b>
	Előd Páll, Levente Tamás, and Lucian Buşoniu	
11.1	Introduction	253
11.2	Quadcopter Structure and Control	255
11.3	Quadcopter Hardware and Software	256

11.4	Methodological and Theoretical Background	257
11.4.1	Feature Detection	258
11.4.2	Feature Tracking	260
11.5	Approach	266
11.5.1	Software Architecture	266
11.5.2	Quadcopter Initialization	267
11.5.3	Perspective Vision	268
11.5.4	VP Tracking	270
11.5.5	Control	270
11.6	Experiments and Results	272
11.6.1	VP Motion Model Results	272
11.6.2	Nonlinear Estimator Results	274
11.6.3	Indoor and Outdoor Results	275
11.6.4	Control Results	276
11.7	Summary & Perspectives	276
<b>12</b>	<b>Bilateral Teleoperation in the Presence of Jitter: Communication Performance Evaluation and Control</b>	<b>279</b>
	Piroska Haller, Lőrinc Márton, Zoltán Szántó, and Tamás Vajda	
12.1	Introduction	279
12.2	Communication Performance Evaluation for Wireless Teleoperation	281
12.2.1	The Wireless Communication Medium	281
12.2.2	Implementation of Application Layer Measurements	283
12.2.3	Experimental Measurements	284
12.3	Control of Bilateral Teleoperation Systems in the Presence of Jitter	289
12.3.1	Control Approaches to Assure the Stability in Bilateral Teleoperation Systems	289
12.3.2	Bilateral Control Scheme to Deal with Jitter Effects	293
12.3.3	Control Experiments	294
12.4	Conclusions	297
<b>13</b>	<b>Decentralized Formation Control in Fleets of Nonholonomic Robots with a Clustered Pattern</b>	<b>299</b>
	Marcos Cesar Bragagnolo, Irinel-Constantin Morărescu, Lucian Buşoniu, and Pierre Riedinger	
13.1	Introduction	299
13.2	Problem Formulation and Preliminaries	302
13.2.1	Robot Dynamics and Tracking Error	303
13.2.2	Network Topology and Agreement Dynamics	304
13.3	Solving the Consensus and Tracking Problems	307
13.3.1	Linear Consensus for Networks with a Cluster Pattern	307
13.3.2	Tracking for Nonholonomic Systems	310
13.4	Overall Controller Design	311
13.5	Simulation Results	314
13.5.1	Small-scale Example: Ellipse Formation	314

13.5.2	Large-scale Example: Three-leaf Clover Formation . . . . .	315
13.6	Conclusions and Perspectives . . . . .	316
<b>14</b>	<b>Hybrid Consensus-based Formation Control of Nonholonomic Mobile Robots</b> . . . . .	<b>319</b>
	Haci M. Guzey, Travis Dierks, and Sarangapani Jagannathan	
14.1	Introduction . . . . .	319
14.2	Background on Hybrid Automata . . . . .	322
14.3	Hybrid Consensus-based Formation Control of Holonomic Robots	323
14.3.1	Regulation Controller Design . . . . .	324
14.3.2	Consensus-based Formation Controller Design . . . . .	326
14.3.3	Hybrid Consensus-Based Regulation and Formation Controller Design . . . . .	327
14.4	Hybrid Consensus-based Formation Control of Non-holonomic Robots . . . . .	329
14.4.1	Nonholonomic Mobile Robot Equations of Motion . . . . .	329
14.4.2	Regulation Controller of Mobile Robots . . . . .	330
14.4.3	Consensus-Based Formation Control of Nonholonomic Mobile Robots . . . . .	333
14.4.4	Hybrid Consensus-Based Formation Control . . . . .	335
14.5	Simulation Results . . . . .	337
14.5.1	Omnidirectional Robots . . . . .	338
14.5.2	Nonholonomic Mobile Robots . . . . .	339
14.6	Conclusions and Future Work . . . . .	342
<b>15</b>	<b>A Multi Agent System for Precision Agriculture</b> . . . . .	<b>345</b>
	Amélie Chevalier, Cosmin Copot, Andres Hernandez, Clara Ionescu, and Robin De Keyser	
15.1	Introduction . . . . .	345
15.2	General Architecture . . . . .	347
15.3	Methodology . . . . .	349
15.3.1	Model Identification . . . . .	349
15.3.2	Low-Level PID Cascade Control . . . . .	352
15.3.3	High Level Model-Based Predictive Control . . . . .	357
15.4	Experimental Results . . . . .	362
15.4.1	Formation Control of UGVs . . . . .	363
15.4.2	Path Following for the Quadrotor . . . . .	364
15.4.3	Quadrotor as Flying Sensor for Ground Agents . . . . .	366
15.5	Conclusions . . . . .	367
	<b>Index</b> . . . . .	<b>369</b>
