

Perfection in process integration -

robotics, automation and special purpose machinery

Baumann develops and produces turn-key automation systems for customers from various international industries including the automotive suppliers, electronics, domestic appliances, telecommunications, medical technology and photovoltaic sectors. Everything from a single source – from a stand alone robot cell to a fully automated production line.

With over 30 years of experience we know the market and recognise the latest trends and developments in industrial production, providing you with flexibility and efficiency gains and a competitive advantage in your industry. Thanks to extensive cooperation with many customers, Baumann Automation is able to offer flexible, scalable and agile basic platforms.

Clients have a wide choice of manufacturing methods, assembly systems, handling solutions and test systems, which, due to the modular design principle, can be integrated easily into production lines. More than 550 employees are part of the Baumann automation Team.
